TOVCOL MPL

HIGH STICKINESS WATER-BASED ADHESIVE FOR RESILIENT FLOORS

Tovcol MPL is an acrylic adhesive in water dispersion to bond any type of resilient floorings inside: LVT, vinyl floors, fabrics, linoleum, cork etc, of any size both in rolls and panels. The adhesive can be applied on any sub-floor including non absorbent ones and under-hearing systems; it may be also used in vertical position.

Tovcol MPL has a very low VOC content, a very long open time and a quick and tough initial tack. The product is ready to use, soft and easy to apply in a single coat.

		Technic	al data		Tested -
Physical characteristics (20°C – 60% R.H.)					
Aspect		Dense paste	Spec	ific gravity	1,4 g/cm ³
Viscosity		35.000 mPa·s	pН		7
Ratio & times (20°C – 60% R.H.)					
Waiting time		10 - 30 minutes	Light	traffic	4 - 6 hours
Open time		50 - 60 minutes	Read	ly for use	2 - 3 days
Technical characteristics					
Application		Trowel nr.2	Peel	90° EN1372	> 3 N/mm
Consumption (depending on trowel, substrate porosity and type of backing)		200-400 gr/m ²	Appli	ication temperature	> 10 °C < 35 °C
Storage & Labeling					
Storage in original unopened packaging		12 months. Protect from frost			
Tools cleaning	Immedia	nediately after use with water, with Stripcoll or alcohol			
Packaging		buckets 15 kg			

Sub-floor preparation.

Tovcol MPL can be applied on any type of substrate or pre-existing flooring, in good conditions. Concrete screeds must be even, resistant to compression, free of dust and residues, without any damp raising. The humidity level in concrete sub-floors must not be higher than 2,5 - 3% and 0,5% for anhydride ones. Uneven sub-floors must be leveled with a proper Tover leveling compound. In case of much absorbing or dusty sub-floors, apply one coat of Nano-Fix or Primer C4 diluted at 50% with water.

Application

Before laying, be sure that the adhesive, the flooring and the substrate are at the same recommended temperature. It is important the resilient floor to be laid is unpacked several hours before the laying to decrease internal tensions due to the packing.

Application

Apply Tovcol MPL uniformly on the surface to be treated with a trowel (low teeth – Nr. 2); wait for 10 to 30 minutes so that most of the water contained into the adhesive evaporates; in that way the tack on the back of the floor will be immediate. On non absorbent sub-floors the waiting time will be longer: 20-40 minutes.

Generally speaking it is anyway recommended not to wait further than the adhesive open time (50-60 min.) in order to guarantee an efficient wetting of the flooring back.

Immediately after laying, it is important to smooth the surface from the center to the sides with a roller or a wooden trowel in order to remove air bubbles and to enable a perfect wetting.

In any case follow the installation instructions from the floor covering manufacturer. Notes

- In case of high temperature the open time could be sensitively reduced. Do not wait over 45 minutes.
- ✓ Protect from freeze.

Safety rules

FOR PROFESSIONAL USE ONLY. Strictly respect the information reported on the labels and consult safety data sheets before use.

Disposing of waste -

Dispose not used product and empty containers in accordance of local in force regulations.
